

HEICO group was founded in Germany in 1900 and has developed to a leading provider of high quality solutions with 13 subsidiaries globally.

HEICO-LOCK® wedge locking system is an effective securing technology which meet DIN25201-4 standard. Its main feature is using tension instead of friction to secure bolt connections. The system works at low and high preload levels including when using lubricants. It is very easy to be installed, removed and re-used.

HEICO-TEC® tension nut meets all requirements of ISO 898-2 thus can replace any conventional nut with same strength. A hand-held torque wrench is all needed. Confirmed by DNV GL, it guarantees repeatable tightening accuracy better than +/-5%.
